01 · 3D HOUSE VISUALIZATION

Ground Floor Model

The architectural model below represents the internal spatial layout of the ground floor, generated from your provided project data. The 3D rendering illustrates room boundaries, entry points, and spatial distribution.

Design Summary

The provided visualizations include the internal architectural layout model matching your project data. All rooms, corridors, and transitional spaces are proportionally represented within the floor plan.

02 · VASTU ANALYSIS REPORT

Ground Floor Vastu Analysis

Placement Analysis

Entrance	Exact coordinates for the main entrance were not explicitly provided in the data. A specific Vastu analysis for its placement cannot be accurately rendered based on available information.
Kitchen	Situated in the West Mathematical Zone (Center: X:6.0, Y:23.5). According to Vastu Shastra, the ideal placement is the South-East (Agnimoolai), the zone of fire. The West placement is considered a Vastu violation, potentially leading to financial instability and health issues.
Master Bedroom	Located in the North-West Mathematical Zone (Center: X:7.9, Y:6.9). While acceptable for a general bedroom, the most favorable zone for the Master Bedroom is the South-West (Niruthi), providing stability and authority. The North-West placement may cause restlessness.
Bathrooms	Two toilets are present — one in the North Zone (Center: X:17.5, Y:4.8) and another in the West Zone (Center: X:5.0, Y:15.7). Both placements are generally acceptable per Vastu principles and do not pose significant violations.
Staircase	Optimally positioned in the South-West Mathematical Zone (Center: X:6.0, Y:32.5). This is highly favorable, aligning with Vastu principles for heavy structures in the South-West, ensuring stability, strength, and well-being.
Pooja Room	A dedicated Pooja Room is not identified in the provided room coordinates. The North-East zone (most auspicious for Pooja) is currently occupied by a bedroom — this is a Vastu concern.
Living & Dining	Favorably located in the East Mathematical Zone (Center: X:22.6, Y:24.7). The East is highly auspicious for gathering areas, promoting positive energy, social harmony, and good health.

Key Vastu Benefits

✓ Living & Dining area in the East (X:22.6, Y:24.7) is an excellent Vastu placement, inviting positive energy, good health, and social harmony.

- ✓ Staircase in the South-West zone (X:6.0, Y:32.5) is highly compliant, ensuring stability, strength, and financial well-being.
- ✓ Toilets in the North (X:17.5, Y:4.8) and West (X:5.0, Y:15.7) are acceptable Vastu placements for waste disposal areas.

Reasons for Score Reduction

-20 pts	Bedroom in North-East zone (X:25.1, Y:6.9). The North-East (Eesanyam) is sacred and ideal for Pooja or open spaces. Placing a bedroom here obstructs cosmic energy, potentially causing health issues and spiritual hindrance.
-15 pts	Kitchen in the West zone (X:6.0, Y:23.5). Ideal location is South-East (Agnimoolai). West placement may cause health problems for female members, financial instability, and household disputes.
-5 pts	Master Bedroom in the North-West zone (X:7.9, Y:6.9). South-West is most auspicious for the Master Bedroom. Current placement may cause instability and restlessness.

Vastu Improvement Suggestions

Suggestion 1: Bedroom in North-East Strongly recommended to relocate this bedroom. Ideally convert the North-East space into a Pooja Room or meditation area. If relocation is not possible, keep it clutter-free, well-lit, and paint walls in light soothing colors (white or light blue). Consider placing a copper pyramid in the North-East corner to mitigate negative energies.
Suggestion 2: Kitchen in the West If relocating to the South-East is not feasible, place a Vastu pyramid or a picture of Lord Agni in the South-East corner of the existing kitchen. Ensure cooking is done facing East and use yellow or cream colors for the kitchen walls.
Suggestion 3: Master Bedroom in North-West If the Master Bedroom cannot be moved to the South-West, ensure the bed head faces South or West. Use heavy furniture (large wardrobe) in the South-West corner to stabilize energy. Avoid placing mirrors directly opposite the bed.

03 · COST ESTIMATION

Ground Floor – Construction Cost Packages

PACKAGE	DESCRIPTION	ESTIMATED COST
BASIC	Standard construction with basic finishes	Rs. 40,04,687
STANDARD	Mid-range materials with improved finishes	Rs. 54,06,327
PREMIUM	High-end materials with premium finishes	Rs. 70,08,202

Material Quantity & Rate Breakdown

MATERIAL	QUANTITY	UNIT	RATE (Rs)	ESTIMATED COST (Rs)
Sand	2,525	cft	45	1,13,625
Paint	42	liters	250	10,500
Steel	5,611	kg	65	3,64,715
Tiles	1,543	sqft	55	84,865
Bricks	12,200	pcs	9	1,09,800
Cement	561	bags	380	2,13,180
Plumbing	1,403	sqft	100	1,40,300
Electrical	1,403	sqft	120	1,68,360

Note: Grand Total depends on the selected finishing package and prevailing market material rates. All rates are indicative and subject to revision.

04 · STRUCTURAL ANALYSIS

Based on AI-assisted engineering algorithms, the load-bearing distribution, column placement, and foundation specifications have been evaluated for the ground floor.

12 Recommended Columns	2,66,523 kg Estimated Load	5 ft Foundation Depth	94 / 100 Integrity Score
---------------------------	-------------------------------	--------------------------	-----------------------------

Beam Layout Plan

■ Master Bedroom	■ Toilet
■ Bedroom	■ Toilet
■ Kitchen	■ Living and Dining
■ Staircase	■ Study Room

Beam Schedule

MARK	SIZE	TOP STEEL	BOTTOM STEEL	STIRRUP
B1	9" × 12"	2 – 16mm dia	2 – 16mm dia	8mm @ 6"
B2	9" × 9"	2 – 12mm dia	2 – 12mm dia	8mm @ 8"

Structural Material Estimation

Cement	631 Bags
Steel (Rebar)	5,892 kg
Sand	2,525 cft
Coarse Aggregate	3,086 cft

✓ VERIFIED | Structural Integrity Score: 94 / 100

05 · FRONT ELEVATION BLUEPRINT

[Front Elevation – Rendered View]

[Isometric Floor Layout]

Elevation Design Features

- ◆ Large glass facades implemented for maximum natural lighting.
- ◆ Minimalist overhangs and linear geometric forms throughout.
- ◆ Textured stone and wood composite exterior finishes applied.
- ◆ Proportional height distribution across all designed floors.
